

Weill Cornell Medicine

You may be eligible if you:

- Are a woman aged 40-65 years
- Are experiencing or are concerned about experiencing symptoms of menopause

The Women's Brain Health Research Project

Of Weill Cornell Medical College/NY
Presbyterian

Approximately 1.5 million women enter menopause each year, with not only familiar symptoms like hot flashes and disrupted sleep, but also potential cognitive and mood changes.

Expanding to include women in perimenopause only highlights the need to understand female sex hormones and their interactions with cognitive health.

Our new clinical research study is investigating **the effects of menopause on brain aging and risk of Alzheimer's disease.**
